

The forerunner in manure recycling convenience

MILLCREEK MANUFACTURING CO.

MANURE SPREADERS

Manage your ‘Muck’ with Millcreek…

Glorious Muck!

The benefits of manure from horses and other domesticated livestock has long been recognised as ‘the’ natural food for all plants. Be it pasture for grazing or hay, wheat for milling, or vegetables for eating, manure provides the essential nutrients for plant growth and a healthy sustainable land… and if you keep livestock… you get it for free!

The right tool for the job!

The Millcreek range of compact manure spreaders are specifically designed for use by private horse owners, commercial equestrian centres, smallholders and organic farmers. Available in five sizes and either ‘Ground’ or ‘PTO’ driven, Millcreek spreaders can be easily operated by machines as small as ride on mowers, through ATV’s, 4x4’s, traditional tractors, or even your horse in harness!

Engineered to perform!

In production since 1986 the Millcreek range has been refined over the years and helped thousands of customers manage their muck and enhance their land. The proven Millcreek ‘rear discharge’ spreader design features:

- Low wide beds, for easy loading by hand or mechanical loader
- Tough oven baked powder coated steel bodies with ‘rot free’ recycled plastic floors for a long life in the harshest farm environments
- Heavy duty ‘T-rod’ apron (conveyor) chains and roller drive chains
- Simple low maintenance designs allow engagement/disengagement of the rear beater and apron chain mechanisms as/when required
- Easy to achieve even and consistent spread patterns with all livestock manures and bedding materials
- Low centre of gravity for stability in use, especially when working on steep slopes

Four ‘Ground’ drive models…

Model 27

Our smallest and best selling spreader! Compact, easily manoeuvrable by hand and ideal for use behind the widest range of tow vehicles from 15hp ride-on mowers and 250cc ATV’s on up. Like all of our ‘Ground’ drive models, simply load it up, drive to where you want to spread, engage the control levers, and drive forward at a fast walking pace to spread the muck quickly and evenly…

- 0.75m^3 heaped capacity (typically up to around 0.5 ton fully laden with wet manure)
- Low height of just 67cm (27”) for easy hand or mechanical loading, & only 1.22m (4ft) wide
- Tow with almost any vehicle (15hp min. recommended)
- Proven, simple and reliable ‘ground driven’ design… Patented over 100 years ago!
- Tough enough to cope with wet heavy rotted farm yard manure, and deep litter bedding!
- Optional: Endgate; Folding Dolly Wheel; Fines Pan and Tow Ball Coupling…

Model 37

Exactly the same width and height as the Model 27, the Model 37 is simply lengthened by 61cm (2ft) to increase capacity by 33%. The axle is also moved forwards to improve balance and manoeuvrability

- 1.0m^3 heaped capacity (typically up to around 0.65 ton fully laden with wet manure)
- Optional: Endgate; Folding Dolly Wheel; Fines Pan and Tow Ball Coupling…

Model 57

Our second best selling spreader, and a real versatile workhorse around the stables or farm! The Model 57 has double the capacity of the Model 27 whilst still being manageable by hand and easily manoeuvrable in confined spaces. Very popular with larger ATV’s, utility vehicles and 4x4’s, the Model 57 with the assistance of a mechanical loader can easily spread over 30 tons in a day!...

- 1.5m^3 heaped capacity (typically up to around 1.25 ton fully laden with wet manure)
- Low height of just 86cm (34”) for easy hand or mechanical loading, & only 1.47m (4ft10”) wide
- Tow with larger ATV’s (450cc min. recommended), 4x4’s, tractors and horses in harness!
- Superbly balanced and easy to move by hand, despite weighing almost 1/3rd ton empty!
- Can be adapted for spreading Fodder Beet and other root crops for feeding livestock
- Optional: Endgate; Upper Beater, Fines Pan and Tow Ball Coupling (Jack Stand is std.)

Model 77

Exactly the same width and height as the Model 57, the Model 77 is simply lengthened by 61cm (2ft) to increase capacity by 33%. As with the Model 37, the axle is moved forwards to improve balance and manoeuvrability. Big capacity, without the need for a tractor with PTO!.

- 2.0m^3 heaped capacity (typically up to around 1.65 ton fully laden with wet manure)
- Optional: Endgate; Upper Beater, Fines Pan and Tow Ball Coupling (Jack Stand is std.)

Always ensure your Millcreek spreader is operable safely within the limits of your tow vehicle, as specified by the vehicle manufacturer

Three ‘PTO’ drive models…

Model 57

All the benefits of a rear discharge spreader, but with only a 20hp tractor requirement (less in many cases) means the Model 57 is our best selling PTO model. Popular with equestrian users, market gardeners and organic farmers amongst others, the tough little Model 57 earns its keep in the widest range of applications. Simple low maintenance drive mechanisms (common with the larger 77 and 97 models) mean high work rates and great reliability!

- 1.5m^3 heaped capacity (typically up to around 1.25 ton fully laden with wet manure)
- Low height of just 86cm (34”) for easy hand or mechanical loading, & only 1.58m (5ft2”) wide
- Superbly balanced and easy to move by hand, despite weighing almost 1/3rd ton empty!
- Ideal for restricted space applications, but with the advantage of PTO control, the ‘57’ can even be found working inside glasshouses and polytunnels!
- Optional: Endgate; Upper Beater, Fines Pan and Pick-up Hitch Ring (Jack Stand is std.)

Model 77

Exactly the same width and height as the Model 57, the Model 77 is simply lengthened by 61cm (2ft) to increase capacity by 33%. As with the Model 37, the axle is moved forwards to improve balance and manoeuvrability. Only a 22hp tractor is required to operate the ‘77’!

- 2.0m^3 heaped capacity (typically up to around 1.65 ton fully laden with wet manure)
- Optional: Endgate; Upper Beater, Fines Pan and Pick-up Hitch Ring (Jack Stand is std.)

Model 97

Exactly the same body length and height as the Model 77, the Model 97 is simply widened by 46cm (18”) to increase capacity by 50%, with appropriate modifications including a heavier duty axle, six bolt wheels and wider 12 ply tyres to accommodate the bigger payload. With only a 25hp tractor requirement, the Model 97 is a welcome addition to many larger equine establishments and a diverse range of smaller farming ventures

- 3.0m^3 heaped capacity (typically up to around 2.5 ton fully laden with wet manure)
- Low height of just 99cm (39”) for easy hand or mechanical loading, & only 2.03m (6ft8”) wide
- Optional: Endgate; Fines Pan and Pick-up Hitch Ring (folding Jack Stand is std equip.)…
- Like all Millcreek spreaders, the Model 97 is often used in other specialist applications including spreading composts, wood chips, green waste, sand/rubber mixes, grass clippings and even fresh cut long stalk hay (for pasture rejuvenation projects)
